(a) From 1st July, 1966 this area supersedes "Hobart and Suburbs"; although in broad terms, this is a change of title only, the new area differs from "Hobart and Suburbs" by excluding (i) the rural parts of the cities of Hobart and Glenorchy and (ii) the Kingston-Blackmans Bay area. As the details shown under Hobart Metropolitan Area for periods prior to July 1966, refer to "Hobart and Suburbs", the table should be interpreted accordingly.

(a) Up to and including 1958 average rainfall for each year (represented by 100) is the average over the period 1911–1942. As from 1st January, 1959 a long period average from a selection of representative stations is used.

SEASONAL CONDITIONS, TASMANIA: AUGUST, 1966

Rainfall: District average falls during August, 1966 reverted to below normal throughout the whole of the State. Deficiencies ranged from only slightly below on Flinders Island to a maximum of more than forty per cent below in the Derwent Valley. The agricultural areas of the North and Midlands districts received only approximately 30 per cent of the usual amount of rain.

Temperature: Mean temperatures were below normal over the greater part of the State. Exceptions to this were two large areas—one in the west and north-west coast and another east of the Tamar Valley. The chief factor in the below-normal mean temperature was the extensive negative values for mean minima.

Frosts were frequent throughout the month, particularly during the first and last weeks.

Rural Conditions: Noticeable pasture growth was reported from most agricultural districts during the month, although ground frosts tendered to restrict it somewhat in less favourable areas. Despite the growing conditions, however, pasture production in the Central North, North East and parts of the Midlands was below stock requirements for this period of the year. Continued pasture damage by grubs in the lighter soil areas of the North was reported.

Cereal forage crops maintained excellent growth rates during the month and provided much of the green fodder required by stock in those areas poorly served by pastures. Growth of cereal grain crops was also very good and prospects for the coming harvest appeared heartening.

There was some disruption to the planting schedule for green peas and potatoes as a result of heavy rainfalls during the month, but earlier sown crops continued to make satisfactory growth.

Lambing continued in conditions that were, for the most part, favourable, and while some lamb losses did result, their numbers were not greater than usual.
